A total of 31 people attended the Bridge Deck Overlay session (22 State representatives, 7 Industry representatives, 1 AASHTO and 1 FHWA representative)

- 2003 minutes were reviewed

- NCHRP 20-7 proposal for testing procedures for thin bridge deck overlays was briefly discussed. This should be completed prior to next year's meeting and give us more guidance as to what tests are needed. Also, Robert Stewart is going to send out an informal survey to the States to seek answers to the same testing questions.

- We discussed having an AASHTO SCOM liaison but are unsure as to which committee we need to work with. No decisions were made.

- Our panel is currently composed of the following members: Steve Hall (TN) (Chairman), Robert Stewart (Utah) (Vice-Chairman), Danny Lane (TN), Peter Kemp (Wisconsin), Simon Greensted (Stirling Lloyd Products) and Steve Peterson (Chemrex). There were several additional states and industry representatives that requested to be added to the panel. This was discussed at the “close-out” meeting with the States and the conclusion was that 10 AASHTO State members and 2 Industry members could be on the panel. Industry should decide between themselves who will represent them.

- The meeting was adjourned.
