1) Introductions (Please be sure to sign the Attendance sheet and indicate if you are a member of RSCP or would like to join)

2) Issues concerning last year’s sampling and testing process
   - Kansas – Manufacturers - know your product! (Type). Mix designs need to be consistent between product data sheets and submittal info.
   - New York
   - Ohio – As far as Ross Mills concerned, field testing went OK

   - Kansas – 1 year 2008 submittals have been sent out for review. 2 year 2007 submittals have recently been published. 2009 submittals are being tested as we speak.
   - New York
   - Ohio
   With DataMine, lab testing will be released as soon as it is complete.

4) Work Plan
   - Discuss changes proposed – Cementitious – C 266 (cement paste/mortar) vs. C 403 (mix wet sieved)

Andrew Fulkerson was concerned about set time in relation to wet-sieving.
Nick Nicholson was concerned about the sample size using mortar with C 266
Nick recommended that C 403 be run with dry sieving instead of wet sieving. He was concerned with some of the numbers in the past.
Mark – Recommends AASHTO test reference and year.
Florida appreciates having the year included.
Nick Nicholson – PM – Has anything been run under C 403 yet? No and the testing lab has not had an issue with the proposed test.
Andrew said that dry sieving would alter the set times because the aggregate would not be present as a heat sink.
Ross was concerned that dry sieving would alter the W/C ratio.
Tom Richardson – BASF – ICRI (and maybe ACI 546) recommends C 266 or C 191 for set-time.
Illinois suggests that set-time is not of extreme importance to owners, more so for contractors.
AF – Optional test in C 928, runs 266 and 191
NN – 191
BASF- 191
Decision: TC voted to remove set-time test from the work plan for cementitious and polymer modified.
ACI 546.3R-06

National Transportation Product Evaluation Program 2010
Hilton Orlando Hotel
Orlando, Florida
ICRI Guide 03740

Freeze/Thaw - C 666, Procedure B
OK prefers A because certain aggregates will pass B but not A, but will use whatever we decide.
Ross – should we hold patching materials to the same standard as concrete?
IL – Do whatever the testing state prefers.
Bill Real – NH – prefers A
BASF – Prefers A
AF – A is a much more severe test than B

\textbf{Decision: Shelved – to be further discussed at 1\textsuperscript{st} conference call}

New York Freeze/Thaw test.
NY accepts NTPEP as an option.
BASF – Industry standard is C 666
FL – I don’t understand the NY test. Is it more severe?

\textbf{Decision: To be optional test.}

1200 psi – Definition of Rapid Set
Proposal to move to 1000 psi at 3 hours (R2 requirement)
Ross – Want to leave something in there to eliminate slow cure concretes.
AF – R1 is more stiff and probably not suited for highway applications. (Vertical, Prestressed Beams)
Less than three hours $\rightarrow$ less or equal to 3 hours

\textbf{Decision: Ballot as 1000 psi.}

Deck preparation
Aamer Syed (Sika) – ICRI specifies standard surface preparation profiles
AF – ICRA – visual only, nothing to do with the amplitude of the roughness
AF – recommends that surface prep satisfy the RSCP manufacturer
AF – Surface Prep should not be part of the 4 hours

\textbf{Decision: Ross to talk with Ohio}

Additional Tests
Not identified

\textbf{Decision: Address with Virginia}

- Review dates/deadlines for 2010

5) ePEF – to be used for 2010 submittals. Call Greta for questions.

6) DataMine – Should be online by 4\textsuperscript{th} qtr.

7) Data Usage Guide – Short brief definition of each test, typical range of values to be generated.

\textbf{Draft by 3\textsuperscript{rd} conf call, final by 2011 annual meeting}

8) Quarterly conference calls – June, Sept, Dec

\textbf{National Transportation Product Evaluation Program 2010}
Hilton Orlando Hotel
Orlando, Florida
AASHTO/NTPEP 2010 ANNUAL MEETING
Rapid Set Concrete Patching Materials (RSCP)
Technical Committee Agenda
Wednesday, May 12, 2010 (1:00 pm-3:00pm)
Working Session #6

8) QC – validate, replicate, duplicate test results – to be visited further

9) Sampling by local DOT rep – any problems?
   We will explore ways to make the procedure better. Will discuss in conference call.

10) One product produced at multiple plants
    FL – suggest that we randomly select the plant to sample from
    NN – Aggregate included with product, aggregated marketed separately, local aggregates supplied in the field (1st is most desirable, 3rd least desirable)

11) AASHTO format work plan
    Draft has been created by Henry Lacinak but not reviewed by the TC

12) Clemson report on slant shear bond strength.
    NN - No real progress in ASTM
    This will take awhile to develop.

9) Questions/Comments

8) If time – Detail discussion of Work Plan for new states and/or new attendees

9) Adjourn
